# Geogrid Standard

## Geogrid - ideal for pathways & car parks

- » Can support up to 25 tonne axle loads
- » Creates attractive pathways, field entrances and car parking areas that are SUDS compliant
- » Geogrid Standard offers high durability throughout the year by withstanding even the harshest of weather
- » Can fit any area as they can quickly be cut-to-size to accommodate the available space to its full potential
- » Geogrid Standard is very cost-effective as it delivers a very robust & long-lasting result. While being lightweight & simple to transport, which lowers costs significantly
- » Ideal for use where a stable surface is required for pedestrian & light vehicle traffic

Geogrid Standard is the perfect solution for creating permeable pathways and attractive car parking areas.

## Technical Specifications

Material:	100% Recyclable HDPE	
Dimensions:	500mm length x 500mm width x 40mm deep (4 per sq m)	
Thickness:	1.57"	40mm
Connection:	Interlocking male and female lugs	
Weight:	8.8lbs	4kg per sq m

## Features

Geogrid Standard is cost-effective as they are large and light, making transportation, handling and installation quick and easy.

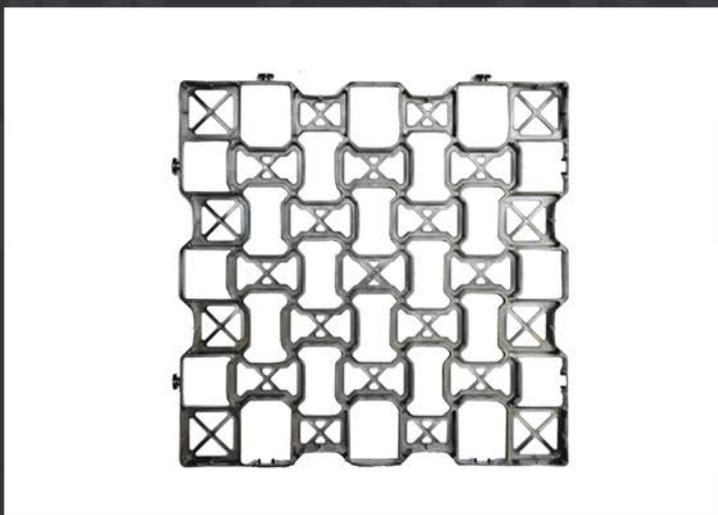

Ultra durable and totally stable, Geogrid Standard is made from a non-slip, crack-proof and weather-proof material, offering your areas a non-expanding and stable surface for a variety of activities.

With low installation costs, Geogrid Standard can be filled with grass or gravel to improve appearance on-site.

## Benefits

Geogrid Standard has many applications such as field entrances, driveways and footpaths. However, the most common application is for creating large car parks. This is because, as well as gravel car parks becoming more and more popular, consumers and companies are seeking a more natural finish and the attractiveness of having an environmentally friendly alternative to Tarmac.

Geogrid Standard and Premium can quickly transform rutted, soft ground into a self-permeable attractive car park.
