

Medium Duty Mesh

GRASSFORM PRODUCT GUIDELINE

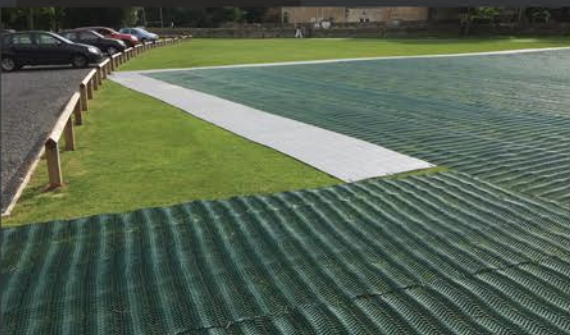

Medium Duty Mesh

Grass Car Parks | Pedestrian Paths | Equestrian Surfaces

Suitable for light vehicle and heavy pedestrian use

- » Minimal ground preparation required, making installs quick and simple for short turnaround schedules
- » Fast and cost-effective installation compared to plastic paving grids
- » Suitable for permanent or temporary applications
- » Up to 97% improved slip resistance compared to the standard grass protection meshes
- » Robust, reliable and simple to install
- » Protects medium-usage grassed areas from becoming a muddy mess
- » Perfect alternative to impermeable paved surfaces

Internationally proven Medium Duty Mesh delivers strong temporary access for all weather and ground conditions.

- » Civil Engineering » Transmission
- » Construction » Infrastructure
- » Oil & Gas » Military Sites
- » Utilities Maintenance » Events

Technical Specifications

Dimensions

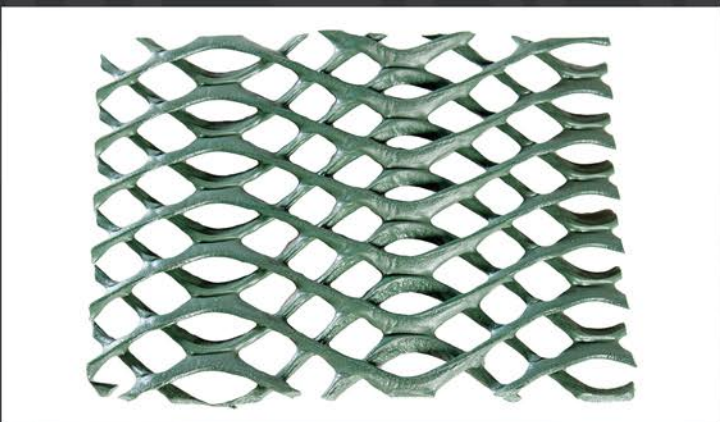

Option 1:	3.3' x 32.8'	1m x 10m
Option 2:	6.6' x 65.6'	2m x 20m
Depth:	0.45"	11.5mm
Weight:	2.6lbs	1.2kg per m ²
Surface Area:	32.8' ² or 131.2' ²	10m ² or 40m ²

Structure & Material: Oscillated High Density Polyethylene

Features

Medium duty mesh can be used in grassed areas that need protection or reinforcement from medium loads such as high pedestrian traffic, cars or light vans.

The mesh intertwines with the grass to create a stabilised surface and higher slip resistance for improved safety in an otherwise potentially boggy and rutted area.

Fast & Cost-Effective

Offering good functionality, our standard grass reinforcement mesh is useful in a variety of applications including car parks, pedestrian pathways and making many areas wheelchair accessible.

Our team is highly experienced and can deliver and install our medium duty mesh solution to short turnaround timescales.
